I'm fine with this. My biggest worry all along has been that we don't want to start opining as to how regulatory actions might look in the future but I think the draft leaves this sufficiently open-ended that we should be able to work around the issue. I will just want to pay close attention the draft language when it is developed.

Thanks for the opportunity to comment.

Thanks Jim.

I think this captures the essence of the concern we raised, and I'm not going to wordsmith it.

As I said in one of our meetings, I know I need to reach out to our HQs folks about their thoughts on climate change analyses in project planning. That continues to be a big issue at the national level. I'll report back on what I find out as this unfolds.

(By the way, where is Ken working these days? Is he back at DWR, as suggested by your address list?)

Subject: proposed scope of work for Supplement to BDCP EIR/EIS (CONFIDENTIAL ATTORNEY WORK PRODUCT COMMUNICATION)

John and Tom,

Attached is a proposed scope of work for a discussion of potential future regulatory and operational responses to climate change that might affect the CVP and SWP during the life of the BDCP. I'm sorry it took me so long to get this out to you. The good news is that this document has been thoroughly vetted by DWR's legal staff and climate change specialists, and is acceptable to the Public Water Agencies.

Please let me know what you think by using "track changes" or other means to give me input on how to improve this document from your standpoint. You will see that it is somewhat repetitive in places, but I think that's a relatively small sin, and something that often results when many cooks contribute to a souffle. Of course, if you think that it's perfect without any change, that would be fine too. I look forward to hearing back from you.

Thank you,

Jim Moose
